Earth An Intimate History:

Earth Richard Fortey, 2009-11-04 The acclaimed author of *Trilobite* and *Life* takes us on a grand tour of the earth's physical past showing how the history of plate tectonics is etched in the landscape around us Absorbing Cinematic The ultimate travel book a guidebook that should be read by every person who wants to really know and understand the place we live on The New York Times Beginning with Mt Vesuvius whose eruption in Roman times helped spark the science of geology and ending in a lab in the West of England where mathematical models and lab experiments replace direct observation Richard Fortey tells us what the present says about ancient geologic processes He shows how plate tectonics came to rule the geophysical landscape and how the evidence is written in the hills and in the stones And in the process he takes us on a wonderful journey around the globe to visit some of the most fascinating and intriguing spots on the planet [The Earth](#)

A (Very) Short History of Life on Earth Henry Gee,2021-11-09 The Royal Society's Science Book of the Year A n exuberant romp through evolution like a modern day Willy Wonka of genetic space Gee's grand tour enthusiastically details the narrative underlying life's erratic and often whimsical exploration of biological form and function Adrian Woolfson The Washington Post In the tradition of Richard Dawkins Bill Bryson and Simon Winchester An entertaining and uniquely informed narration of Life's life story In the beginning Earth was an inhospitably alien place in constant chemical flux covered with churning seas crafting its landscape through incessant volcanic eruptions Amid all this tumult and disaster life began The earliest living things were no more than membranes stretched across microscopic gaps in rocks where boiling hot jets of mineral rich water gushed out from cracks in the ocean floor Although these membranes were leaky the environment within them became different from the raging maelstrom beyond These havens of order slowly refined the generation of energy using it to form membrane bound bubbles that were mostly faithful copies of their parents a foamy lather of soap bubble cells standing as tiny clenched fists defiant against the lifeless world Life on this planet has continued in much the same way for millennia adapting to literally every conceivable setback that living organisms could encounter and thriving from these humblest beginnings to the thrilling and unlikely story of ourselves In A Very Short History of Life on Earth Henry Gee zips through the last 4.6 billion years with infectious enthusiasm and intellectual rigor Drawing on the very latest scientific understanding and writing in a clear accessible style he tells an enlightening tale of survival and persistence that illuminates the delicate balance within which life has always existed

Earth Iain S. Stewart,John Lynch,2008 Renowned science writers Stewart and Lynch use groundbreaking imagery and the latest scientific discoveries to tell the epic story of Earth's birth life stages and distant future demise in this companion volume to the National Geographic Channel television series *California: an Intimate History* Gertrude Franklin Horn Atherton,1914

God and the History of the Universe Jarvis Streeeter,2016-03-22 The popular belief that a scientific understanding of reality is incompatible with a Christian one is simply wrong Some Christian understandings of reality do conflict with some scientific understandings But a thoroughly rational Christian understanding of the origin and history of the universe will be informed by the best scientific theories and the facts founded on them This book weaves a narrative of the origin and history of the universe from the perspective of

contemporary science with a Christian understanding of God and of God's role in the origin and history of the universe. At the center of this integrated narrative is the view that God, who is pure unbounded Love, is Creator; the zest for life in the universe comes from God, and God is the source of Truth, Beauty, and Goodness in the universe. God is amazed and delighted at what God and the world has created. God is saddened by ways creatures have fallen short of pure unbounded Love, Truth, Beauty, and Goodness, and God's pure unbounded Love keeps on trying to persuade all creatures toward Truth, Beauty, and Goodness.

Silver by Fire, Silver by Mercury: A Chemical History of Silver Refining in New Spain and Mexico, 16th to 19th Centuries Saul Guerrero, 2017-09-11. In *Silver by Fire, Silver by Mercury: A Chemical History of Silver Refining in New Spain and Mexico, 16th to 19th Centuries*. Saul Guerrero combines historical research with geology and chemistry to refute the current prevailing narrative of a primitive effort dominated by mercury and its copious emissions to the air. Based on quantitative historical data, visual records, and geochemical fundamentals, Guerrero analyses the chemical and economic reasons why two refining processes had to share production, creating along the way major innovations in the chemical recipes, milling equipment, mercury recycling practice, and industrial architecture and operations. Their main environmental impact was lead fume and the depletion of woodlands from smelting and the transformation of mercury into calomel during the patio process.

Earth Sciences History, 2006. [New Earth Histories](#) Alison Bashford, Emily M. Kern, Adam Bobbette, 2023-11-06. A kaleidoscopic rethinking of how we come to know the earth. This book brings the history of the geosciences and world cosmologies together, exploring many traditions including Chinese, Pacific, Islamic, South, and Southeast Asian conceptions of the earth's origin and makeup. Together, the chapters ask: How have different ideas about the sacred, animate, and earthly changed modern environmental sciences? How have different world traditions understood human and geological origins? How does the inclusion of multiple cosmologies change the meaning of the Anthropocene and the global climate crisis? By carefully examining these questions, *New Earth Histories* sets an ambitious agenda for how we think about the earth. The chapters consider debates about the age and structure of the earth, how humans and earth systems interact, and how empire has been conceived in multiple traditions. The methods the authors deploy are diverse, from cultural history and visual and material studies to ethnography, geography, and Indigenous studies, and the effect is to highlight how earth knowledge emerged from historically specific situations. *New Earth Histories* provides both a framework for studying science at a global scale and fascinating examples to educate as well as inspire future work. Essential reading for students and scholars of earth science, history, environmental humanities, history of science, and religion, and science and empire. *Dry Store Room No. 1: The Secret Life of the Natural History Museum (Text Only)* Richard Fortey, 2010-06-24. This edition does not include illustrations. *Dry Store Room No. 1* is an intimate biography of the Natural History Museum, celebrating the eccentric personalities who have peopled it and capturing the wonders of scientific endeavour, academic rigour, and imagination.
