

EARTH

We live on planet Earth. Earth is the third planet from the sun and currently the only planet known to sustain life. Earth revolves around the sun. One revolution or trip around the sun is one year. This orbiting of the sun results in the different seasons on Earth. Earth orbits the sun in an elliptical or oval pattern, not a circular pattern. As Earth moves farther away from the sun, it becomes colder, creating fall and winter seasons.

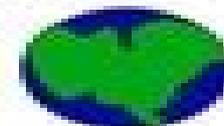

Earth is also tilted or slanted on an axis, meaning some areas are closer to the sun than others. This tilt is responsible for certain areas of Earth being warmer or colder than others.

Earth also revolves on its own axis, this creates the appearance of day and night. Day time is when one hemisphere or half of the earth is facing the sun, night time is when it is turning away from the sun.

Earth has one moon that orbits or revolves around it.

Earth has 7 continents, North America, South America, Africa, Asia, Europe, Australia, and Antarctica. However, these continents were not always separated, they were once a fused or combined together to create one large area called Pangaea. The continents are actually always migrating or moving on tectonic plates.
