

Determination of Parameters of Subsurface Layers Using GPR Spectral Inversion Method

Zhong-lai Huang and Jianzhong Zhang

Abstract—A step-by-step spectral inversion algorithm is proposed in this paper to estimate the thickness, depth, permittivity, and conductivity of layered media from ground-penetrating radar (GPR) signals. Due to the distinct GPR spectral responses to media parameters, different attributes of the spectra are used to estimate, separately, one or several parameters within each step. Such estimated parameters are then used as starting values in a nonlinear optimization problem for the inversion of all parameters simultaneously from the whole GPR spectral data. The cost function of the optimization problem is defined as the difference between the modeled generalized reflection coefficient spectrum of subsurface layers and the actual one. The optimization problem is solved by using a modified stochastic hill-climbing (SHC) algorithm. The method is applied on synthetic data of a wedge model and real data from two highway GPR detections. The results show that the step-by-step spectral inversion method can reduce the ambiguity of the inversion and improve its accuracy and efficiency.

Index Terms—Generalized reflection coefficient, ground-penetrating radar (GPR), layered media, spectral inversion.

I. INTRODUCTION

THE ground-penetrating radar (GPR) has been widely applied in civil engineering and geophysics for the characterization of subsurface structures [1], [2], buried objects [3]–[5], and medium dielectric properties [6]–[8]. In this paper, we focus on layered media concerning which a lot of works have been done so far. Kao *et al.* created a new multilayer model and used the common-middle-point method of seismic exploration to estimate the thickness and dielectric constants of highway pavements [9]. However, the echoes of reflective layers need to be distinguishable in the time domain. Huang and Yi used a parameter calibration method to estimate the permittivity and thickness of pavements, but a drilled core must be provided for *a priori* information [10]. Patriarca *et al.* established an objective function in the frequency domain with Green's function to invert layer thicknesses and dielectric parameters [11]; however, when too many parameters are involved, *a priori* information of the target layers must be given to make accurate estimation.

For GPR detection in a lossy medium, with increasing antenna frequency, the vertical resolution of the GPR data will

increase, but the penetration depth will decrease because of the attenuation of the GPR wave. In some applications of GPR, such as contaminant mapping [12] and fluvial sedimentology [13], the antenna frequency must be sacrificed to reach the penetration depth required, and the vertical resolution of the GPR data will be limited. In addition, since the target region is usually unknown, the antenna frequency chosen in the field measurement may be too low to identify potential thin layers involved in the region. In these situations, when thin layers are encountered, signal processing methods and algorithms should be necessary to improve the resolution of GPR imaging and to estimate thin layers.

Spectral inversion is a seismic method that uses *a priori* information and spectral decomposition to improve images of thin layers whose thicknesses are below tuning thickness, which is defined as a quarter of a wavelength. Puryear and Castagna formulated the method to invert frequency spectrum for layer thicknesses [14]. The method has strong adaptability for thin layers. In this paper, we present an improved spectral inversion method for GPR data. Based on the characteristics of electromagnetic (EM) wave propagation in layered media, we define a generalized reflection coefficient at each interface between two electric layers and use the coefficients to establish a cost function for spectral inversion, which includes parameters of layer depth, thickness, and dielectric properties. Through analysis of the relationship between the parameters and the reflection coefficient spectrum, a new step-by-step method of GPR spectral inversion has been proposed, which greatly helps improve inversion accuracy and convergence speed.

Problem formulation, including derivation of the generalized reflection coefficient and the establishment of the cost function, is given in Section II. The details of the new spectral inversion method are explained in Section III. The method is applied on synthetic data from a wedge model first and then on two real GPR data of highway pavements. The results are presented in Section IV.

II. PROBLEM FORMULATION

A. Generalized Reflection Coefficients

Consider an L -layer model as shown in Fig. 1, where ϵ , σ , and μ are the permittivity, conductivity, and magnetic permeability of the medium, respectively. Each layer is linear, homogeneous, and isotropic. The propagation constant $\tilde{\gamma}$ can be written as [15]

$$\tilde{\gamma} = \alpha + j\beta \quad (1)$$

FAQs About Determination Of Macro Subsurface Models By Generalized Inversion Books

1. Where can I buy Determination Of Macro Subsurface Models By Generalized Inversion books? Bookstores: Physical bookstores like Barnes & Noble, Waterstones, and independent local stores. Online Retailers: Amazon, Book Depository, and various online bookstores offer a wide range of books in physical and digital formats.
2. What are the different book formats available? Hardcover: Sturdy and durable, usually more expensive. Paperback: Cheaper, lighter, and more portable than hardcovers. E-books: Digital books available for e-readers like Kindle or software like Apple Books, Kindle, and Google Play Books.
3. How do I choose a Determination Of Macro Subsurface Models By Generalized Inversion book to read? Genres: Consider the genre you enjoy (fiction, non-fiction, mystery, sci-fi, etc.). Recommendations: Ask friends, join book clubs, or explore online reviews and recommendations. Author: If you like a particular author, you might enjoy more of their work.
4. How do I take care of Determination Of Macro Subsurface Models By Generalized Inversion books? Storage: Keep them away from direct sunlight and in a dry environment. Handling: Avoid folding pages, use bookmarks, and handle them with clean hands. Cleaning: Gently dust the covers and pages occasionally.
5. Can I borrow books without buying them? Public Libraries: Local libraries offer a wide range of books for borrowing. Book Swaps: Community book exchanges or online platforms where people exchange books.
6. How can I track my reading progress or manage my book collection? Book Tracking Apps: Goodreads, LibraryThing, and Book Catalogue are popular apps for tracking your reading progress and managing book collections. Spreadsheets: You can create your own spreadsheet to track books read, ratings, and other details.
7. What are Determination Of Macro Subsurface Models By Generalized Inversion audiobooks, and where can I find them? Audiobooks: Audio recordings of books, perfect for listening while commuting or multitasking. Platforms: Audible, LibriVox, and Google Play Books offer a wide selection of audiobooks.
8. How do I support authors or the book industry? Buy Books: Purchase books from authors or independent bookstores. Reviews: Leave reviews on platforms like Goodreads or Amazon. Promotion: Share your favorite books on social media or recommend them to friends.

9. Are there book clubs or reading communities I can join? Local Clubs: Check for local book clubs in libraries or community centers. Online Communities: Platforms like Goodreads have virtual book clubs and discussion groups.
10. Can I read Determination Of Macro Subsurface Models By Generalized Inversion books for free? Public Domain Books: Many classic books are available for free as they're in the public domain. Free E-books: Some websites offer free e-books legally, like Project Gutenberg or Open Library.
