Dynamics Of Life:

Biological Complexity and the Dynamics of Life Processes J. Ricard, 1999-11-01 The aim of this book is to show how supramolecular complexity of cell organization can dramatically alter the functions of individual macromolecules within a cell The emergence of new functions which appear as a consequence of supramolecular complexity is explained in terms of physical chemistry The book is interdisciplinary at the border between cell biochemistry physics and physical chemistry This interdisciplinarity does not result in the use of physical techniques but from the use of physical concepts to study biological problems In the domain of complexity studies most works are purely theoretical or based on computer simulation The present book is partly theoretical partly experimental and theory is always based on experimental results Moreover the book encompasses in a unified manner the dynamic aspects of many different biological fields ranging from dynamics to pattern emergence in a young embryo The volume puts emphasis on dynamic physical studies of biological events It also develops in a unified perspective this new interdisciplinary approach of various important problems of cell biology and chemistry ranging from enzyme dynamics to pattern formation during embryo development thus paving the way to what may become a central issue of future biology

[A Life-Course Perspective on Migration and Integration](#) Matthias Wingens, Michael Windzio, Helga de Valk, Can Aybek, 2011-07-14 Over the last four decades the sociological life course approach with its focus on the interplay of structure and agency over time life course perspective has become an important research perspective in the social sciences Yet while it has successfully been applied to almost all fields of social inquiry it is much less used in research studying migrant populations and their integration patterns This is puzzling since understanding immigrants integration requires just the kind of dynamic research approach this approach puts forward any integration theory actually refers to life course processes This volume shows fruitful cross linkages between the two research traditions A range of studies are presented that all apply sociological life course concepts to research on migrants and migrant groups in Europe The book is organized thematically indicating different important domains in the life course Using a wide variety of methodological approaches it covers both quantitative studies based on population census data and survey material as well as qualitative studies based on interviews Attention is paid to the life courses of those who migrated themselves as well as their offspring The studies cover different European countries relating to one national context or a particular local setting in a city as well as cross country comparisons Overall the book shows that applying the sociological life course approach to migration and integration research may advance our understanding of immigrant settlement patterns as well as further develop the life course perspective
