EARLY ADOPTER VOICEXML(□□□□) EVE ASTRID ANDERSSON □,2002-03-04 Early adopter voiceXML ,2002

EARLY ADOPTER, Eve Astrid Andersson,2001-08-27 VoiceXML is a Web based markup language for representing human computer dialogs similar to HTML One of the first books to address VoiceXML and or Voice and Internet technology this title is for professional Web developers who want to rapidly leverage their existing knowledge to take advantage of the new language Practical Spoken Dialog Systems Deborah Dahl,2007-09-28 For professional speech researchers there is a rich technical literature covering many years of primary research in speech However this literature is not necessarily applicable to the needs of business people application developers and students who are interested in learning about the practical uses of speech technology On the other hand while existing introductory resources cover the basic mechanics of development of application development as well as aspects of the voice user interface they don t go far enough in dealing with the details that have to be taken into account to make spoken dialog systems successful in practice What s missing is information in between the in depth technical literature and the more introductory development resources The goal of this book is to provide information for anyone who wants to take the next step beyond the basics of current speech applications but isn t yet ready to dive into the technical literature It is hoped that this book will help project managers application developers and students gain a fuller and more complete understanding of spoken dialog technology and the practical aspects of developing and deploying spoken dialog applications *Dictionary of XML Technologies and the Semantic Web* Vladimir Geroimenko,2012-12-06 The emerging Second Generation Web is based entirely on XML and related technologies It is intended to result in the creation of the Semantic Web on which computers will be able to deal with the meaning semantics of Web data and hence to process them in a more effective and autonomous way This new version of the Web introduces a multitude of novel concepts terms and acronyms Purpose Scope and Methods This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies The ultimate goal of this dictionary is even broader than just to define the meaning of new words it aims to develop a proper understanding of these leading edge technologies To achieve this comprehensible definitions of technical terms are supported by numerous diagrams and code snippets clearly annotated and explained The main areas covered in this dictionary are 1 XML syntax and core technologies such as Namespaces Infoset and XML Schema 2 all the major members of the XML family of technologies such as XSLT XPath and XLink 3 numerous XML based domain specific languages such as NewsML News Markup Language 4 the concept and architecture of the Semantic Web 5 key Semantic Web technologies such as RDF Resource Description Framework RDF Schema and OWL Web Ontology Language and 6 Web services including WSDL Web Services Description Language and SOAP Simple Object Access Protocol Practical Intranet Development John Colby,Gareth Downes-Powell,Jeffrey Haas,Darren J. Harkness, Frank Pappas, Mike Parsons, Francis Storr, Inigo Surguy, Ruud Voigt,2013-11-11 An intranet can be a

powerful tool A well designed intranet becomes the key resource and communications platform for your organization used by members of staff as their first destination for information In contrast a poorly designed intranet will sit unused accumulating useless information and eating up IT budgets So how do you avoid this situation and make sure you design the most useful and usable intranet This book takes you through the steps you need to take to make an invaluable intranet from identifying your users needs and building an indispensable tool to marketing the results It guides you through the problems that may occur passing on invaluable advice from people who have been through the process before We start by setting the scene giving an overview of what intranets are and how to justify it to your organization We then give you a rundown of the main areas you ll need to think about when developing an intranet covering browsers development techniques usability content management security and internal marketing Finally we ll take a look at what to do when the Intranet moves beyond its original function looking at remote access extranets and what to do when the Intranet gets too big
