Bulletin, 1929 **Gender Equality and the Olympic Programme** Michele K. Donnelly, 2022-12-22 This innovative study examines the Olympic programme from a critical feminist perspective to shed new light on the issues of gender and inclusion at the Olympic Games and in the Olympic Movement Incorporating both quantitative and qualitative data the book identifies and analyzes the changes and remaining gender differences made on the Olympic Programmes for London 2012 and each of the subsequent Summer and Winter Olympic Games Sochi 2014 Rio 2016 and Pyeongchang 2018 as well as the Tokyo 2020 and Beijing 2022 Games The book draws on the IOC s own publications information from International and National Sport Federations and media sources to describe and explain the IOC s slow and uneven progress toward gender equality at the Olympic Games This is important reading for any student researcher practitioner or policy maker with an interest in the Olympic Games sport studies gender studies women s sport or major events **Invariants And Pictures:**

Low-dimensional Topology And Combinatorial Group Theory Vassily Olegovich Manturov, Denis Fedoseev, Seongjeong Kim, Igor Nikonov, 2020-04-22 This book contains an in depth overview of the current state of the recently emerged and rapidly growing theory of G_n groups picture valued invariants and braids for arbitrary manifolds Equivalence relations arising in low dimensional topology and combinatorial group theory inevitably lead to the study of invariants and good invariants should be strong and apparent An interesting case of such invariants is picture valued invariants whose values are not algebraic objects but geometrical constructions like graphs or polyhedra In 2015 V O Manturov defined a two parametric family of groups G_n and formulated the following principle if dynamical systems describing a motion of n particles possess a nice codimension 1 property governed by exactly k particles then these dynamical systems possess topological invariants valued in G_n The book is devoted to various realisations and generalisations of this principle in the broad sense The groups G_n have many epimorphisms onto free products of cyclic groups hence invariants constructed from them are powerful enough and easy to compare However this construction does not work when we try to deal with points on a 2 surface since there may be infinitely many geodesics passing through two points That leads to the notion of another family of groups n_k which give rise to braids on arbitrary manifolds yielding invariants of arbitrary manifolds **Research Bulletin** George F.
