Applications of Machine Learning in Big-Data Analytics and Cloud Computing Subhendu Kumar Pani, Somanath Tripathy, George Jandieri, Sumit Kundu, Talal Ashraf Butt, 2022-09-01 Cloud Computing and Big Data technologies have become the new descriptors of the digital age. The global amount of digital data has increased more than nine times in volume in just five years and by 2030 its volume may reach a staggering 65 trillion gigabytes. This explosion of data has led to opportunities and transformation in various areas such as healthcare, enterprises, industrial manufacturing, and transportation. New Cloud Computing and Big Data tools endow researchers and analysts with novel techniques and opportunities to collect, manage, and analyze the vast quantities of data. In Cloud and Big Data Analytics, the two areas of Swarm Intelligence and Deep Learning are a developing type of Machine Learning techniques that show enormous potential for solving complex business problems. Deep Learning enables computers to analyze large quantities of unstructured and binary data and to deduce relationships without requiring specific models or programming instructions. This book introduces the state of the art trends and advances in the use of Machine Learning in Cloud and Big Data Analytics. The book will serve as a reference for Data Scientists, systems architects, developers, new researchers, and graduate level students in Computer and Data science. The book will describe the concepts necessary to understand current Machine Learning issues, challenges, and possible solutions, as well as upcoming trends in Big Data Analytics.

[Integrated Intelligent Ecosystem: Data Science, Machine Learning and Cloud Computing](#) G. Manimannan, R. Arunadevi, M. Pushpa, R. Jayashree, 2025-08-14 The rapid evolution of digital technologies has transformed how we understand and interact with the world, creating vast amounts of data and unprecedented opportunities for innovation. This edited volume of book Integrated Intelligent Ecosystem: Data Science, Machine Learning and Cloud Computing explores how these interconnected fields collectively shape the future of technology. In today's data-driven world, the ability to extract meaning from vast and complex datasets has become not only a competitive advantage but a fundamental necessity across industries. Data Science lies at the heart of this transformation, enabling us to uncover patterns, trends, and actionable insights from information that was once considered too unstructured or overwhelming to analyze. Complementing this analytical capability is Machine Learning, which goes beyond static analysis by imbuing systems with the ability to learn from data, adapt over time, and anticipate future outcomes. These intelligent algorithms are revolutionizing everything from personalized recommendations and fraud detection to autonomous systems and healthcare diagnostics. However, the full potential of data science and machine learning can only be realized when paired with the scalable infrastructure needed to support them. This is where Cloud Computing plays a pivotal role. Cloud computing, in turn, provides the scalable backbone that allows these intelligent capabilities to be deployed seamlessly across the globe. By uniting these elements, we create an ecosystem that fuels progress across diverse sectors, from healthcare and smart cities to environmental sustainability and beyond. This edited volume of book is designed to give readers a comprehensive

understanding of the principles interdependencies and practical applications of these technologies Through examples case studies and discussions of current trends it emphasizes the synergy between data algorithms and cloud platforms By the end of this book we hope readers will not only gain a deeper understanding of the theoretical foundations of data science machine learning and cloud computing but also recognize their strategic integration as essential for building intelligent scalable and future ready solutions

Machine Learning for Cloud Management Jitendra Kumar, Ashutosh Kumar Singh, Anand Mohan, Rajkumar Buyya, 2021-11-25. Cloud computing offers subscription based on demand services and it has emerged as the backbone of the computing industry. It has enabled us to share resources among multiple users through virtualization which creates a virtual instance of a computer system running in an abstracted hardware layer. Unlike early distributed computing models, it offers virtually limitless computing resources through its large scale cloud data centers. It has gained wide popularity over the past few years with an ever increasing infrastructure, a number of users and the amount of hosted data. The large and complex workloads hosted on these data centers introduce many challenges including resource utilization, power consumption, scalability and operational cost. Therefore, an effective resource management scheme is essential to achieve operational efficiency with improved elasticity. Machine learning enabled solutions are the best fit to address these issues as they can analyze and learn from the data. Moreover, it brings automation to the solutions which is an essential factor.
