Xiong, Chi-Tang Ho, Fereidoon Shahidi, 2012-12-06

A major challenge for the meat and seafood industries continues to be that of producing high quality wholesome products. Consumers demand for reduced fat, low fat, and fat free meats, red meat, poultry, and seafood with acceptable flavor, texture, and other sensory characteristics, or those similar to typical traditional high fat meats, has imparted further urgency to rising to this challenge. Consequently, meat scientists strive to develop different antemortem strategies, as well as to improve on existing postmortem processing technologies, in order to meet this consumer demand. While the microbiological quality of meat products and seafoods is important from a food safety standpoint, it is the physicochemical attributes and the interactions of the various chemical components of muscle and ingredients which directly influence the product palatability and consumer acceptability. Virtually every step in production and processing, including animal dietary regime, antemortem stress conditions, postmortem handling, product formulation, temperature of processing, packaging, and storage, affects the quality attributes of muscle foods.
