**CHARTING INTELLECTUAL DEVELOPMENT** is a practical, well-organized guide to Piagetian tasks. The purpose of these tasks is to reveal children's thinking strategies at different stages of cognitive, or intellectual, development. Performing the tasks, as described in the book, will enhance each child's ability to observe and learn the operations and evolution of the stages of cognitive growth.

This book includes a representative number of tasks dealing with the acquisition of such concepts as:

- conservation
- classification
- seriation
- mass and effect with multiple
- judgment and reasoning
- space
- time, movement, and speed

Each section begins with a brief introduction. The tasks are then presented in a standardized format which includes a definition of the concept, purpose, methods and questioning used, and a guide to the analysis of the responses which helps determine cognitive stage.

This manual is intended for persons interested in children's cognitive development, who may then use the data collected for case studies or for research purposes. Teachers will find the tasks useful not only for providing information about children's cognitive development but also in making decisions on curriculum content and modes of teaching appropriate to different ages.
