Information Access through Search Engines and Digital Libraries Maristella Agosti, 2007-10-27. The Information Management Systems group at the University of Padua led by Maristella Agosti has been a major contributor to information retrieval and digital libraries for nearly twenty years. This group has produced some of Italy's best known IR researchers whose work spans a broad range of topics as the papers in this book demonstrate. One of the goals of the IR book series is to highlight the work of academic research centers in our field in order to balance the perception that everyone in IR works for a search engine company. One of the best aspects of our field is that as academic researchers we can work with new graduate students and collaborate with companies to ensure that our research has direct impact on systems that people use every day. The Padua group is typical in this respect and has been involved in a series of collaborations and major European projects over the years. I hope this volume inspires graduate students to pursue research in IR and I encourage other research groups to contribute their own collections of papers.

Information Extraction: Algorithms and Prospects in a Retrieval Context Marie-Francine Moens, 2006-10-10. Currently there is a considerable interest in integrating the results of information extraction in retrieval systems because of the growing demand for search engines that return precise answers to flexible information queries. Advanced retrieval models satisfy that need and they rely on tools that automatically build a probabilistic model of the content of a multi media document. The book focuses on content recognition in text. It elaborates on the past and current most successful algorithms and their application in a variety of domains e.g. news filtering, mining of biomedical text, intelligence gathering, competitive intelligence, legal information searching and processing of informal text. An important part discusses current statistical and machine learning algorithms for information detection and classification and integrates their results in probabilistic retrieval models. The book also reveals a number of ideas towards an advanced understanding and synthesis of textual content.

Visualization for Information Retrieval Jin Zhang, 2007-11-24 The amount of digitized information available on the Internet in digital libraries and other forms of information systems grows at an exponential rate while becoming more complex and more dynamic As a consequence information organization information retrieval and the presentation of retrieval results have become more and more difficult Information visualization offers a unique method to reveal hidden patterns and contextual information in a visual presentation and allows users to seek information in an intuitive way Jin Zhang provides a systematic explanation of the latest advancements in information retrieval visualization from both theoretical and practical perspectives He reviews the main approaches and techniques available in the field explains theoretical relationships between information retrieval and information visualization and presents major information retrieval visualization algorithms and models He then takes a detailed look at the theory and applications of information retrieval visualization for Internet traffic analysis and Internet information searching and browsing The author also addresses challenges such as ambiguity metaphorical applications and system evaluation in information retrieval visualization environments Finally he compares these information retrieval visualization models from the perspectives of visual spaces semantic frameworks projection algorithms ambiguity and information retrieval and discusses important issues of information retrieval visualization and research directions for future exploration Readers of this book will gain an in depth understanding of the current state of information retrieval visualization They will be introduced to existing problems for researchers and professionals along with technical and theoretical findings and advances made by leading researchers The book also provides practical details for the implementation of an information retrieval visualization system

The Modern Algebra of Information Retrieval Sándor Dominich, 2008-04-03 This book takes a unique approach to information retrieval by laying down the foundations for a modern algebra of information retrieval based on lattice theory All major retrieval methods developed so far are described in detail along with Web retrieval algorithms and the author shows that they all can be treated elegantly in a unified formal way using lattice theory as the one basic concept The book s presentation is characterized by an engineering like approach
