**Principles of Philosophy** Michael Jean Nystrom-Schut, 2018-10-27 Not just anyone sits down to write their own personal Bible The famous one popular with millions of Christians was penned by 35 40 different authors over a span of some 1100 years As of 1995 it was still considered Guinness the world s 1 best seller of all time In stark contrast Michael s 2 volume Principles of Philosophy was meditated contemplated drafted and written in deep anonymity and solitude over a daily and nightly 30 month span His two books come in at over 800 000 words the same as ten 80 000 word works With the King James Old and New Testament totaling just over 783 000 words it is easy to see why Michael views himself as both prolific plentiful and loquacious talkative when it pertains to laying down thought As the Bible is for millions on the planet Michael feels his principles are also a template an owner s manual a guidebook for in particular how to 1 view life on earth 2 work on the detail of one s philosophy and worldview and 3 examine and conduct a balanced meaningful existence on this planet The Holy Bible consists of 80 books 39 in the Old Hebrew part 14 in the Apocrypha and 27 in the New Christian part Michael s Principles Volumes One and Two each cover 84 chapters of the basic areas of life as he views them with 21 chapters outlined each for 1 the mental 3 the social and 2 the material 4 the spiritual areas of our lives A detailed numbering system is in place for quick reference to topics Each volume happens to come in at 613 entries making a total of 1226 separate entries in the two books By dictionary definition a principle is defined as a fundamental truth or proposition that serves as the foundation for a system of belief or behavior or for a chain of reasoning This is precisely why he chose principles in the title His own personal philosophical principles are what he tries to practice daily Michael even states they are likely the reason he is still with us in bodily form on the earth and remains in relative possession of his right mind as well Since leaving organized religion early on in life these tenants practiced in balance have been what Michael has focused on for several decades They work well for him In the course of these pursuits he says he has come to thousands of conclusions And they all point to the balanced life As he insists for him it is all about equivalent portions of mind mental body material relationships social and spirituality God the Universe Basically everything can be summed up within these four primary areas of life Michael seems to never hesitate to conclude that he has found his own personal means of salvation in the midst of pursuing his balance of the Principles of Philosophy Tanya Walker wife [Keeping It Real in an Unreal World](#)

importance of a cheerful attitude The connection between confidence and humility The importance of character The two components of business trust Five ways to build enthusiasm The connection between effort and success How to be proactive How to plan for success Three ways to improve time management Four ways to increase empathy Seven listening techniques The importance of trust in relationships Persuasive communication Eleven conversation techniques The customer's buying process Four closing techniques Flowing with objections Handling rejection In addition to understanding these time tested fundamentals the reader will be given a unique method of internalizing them This book is a must read for all sales professionals

Inner Experiences of Evolution Rudolf Steiner, 2006-03 5 lectures in Berlin October 31 1911 December 5 1911 CW 132 In this most remarkable and in many ways unique course of lectures Rudolf Steiner describes the inner experience of the states of consciousness known as the Saturn Sun Moon and Earth stages of evolution Lecture by lecture Steiner details the experiences of these states available to one who practices the spiritual scientific path of meditation By this means these stages and states gain an unexpected and existential reality suddenly we recognize what Steiner is talking about Most remarkable of all perhaps is the description of the Earth state with its experience of death which Christ knew on the Cross at Golgotha transforming earthly and human evolution

planned to write a series of books on different subjects that would clear up the confusion Although I had been thinking about writing a book about death for quite some time putting it first was unexpected In general I did not think of such an order since all narratives are treated linearly as birth life and last death It suddenly occurred to me that it was more important to put aside the order of books and write about death I guessed that you have more extensive knowledge to write about this subject and that it will attract more attention unlike other books I will prepare However how much a book with death on it will sell is another matter of discussion In addition to interest it seemed to me as an important justification that it could be at the top of an urgent need list Because in this country thousands of people die every day and their relatives witness their deaths Many chronic and severe patients are also waiting for their death and their relatives are waiting with them Or we may come face to face with unexpected sudden deaths At that time death was prepared as a pre-writable book on the subject as the first book in the series Death is an emergency for mortals and dying Even in a world of death nothing is as serious and remarkable as death Since the ultimate victory is death it is necessary to give priority to understanding it When was man's first thought about death This is difficult to know but a look at the long history of evolution yields some clues Hominid evolution this data confirms once again the importance of function not size of organs these hominids unable to survive and make technical progress seem to think as if they were thinking about death Perhaps because they were ice age people life was difficult for them and they died at an average of 40 Although they had big brains they did not have the clothes they had developed to protect them from the cold Although it has been suggested that Neanderthals buried their dead with religious rituals and floral ornaments it has been suggested that the data found later cannot be interpreted so precisely that the flower pollen found may have been carried there by the wind or that it may have come from the boots of the workers working in the excavation Whatever the story here in the event that a thinking human's hunting friend dies while hunting or his wife with whom he has made love and had a child suddenly dies it is likely that in his moonlit caverns by the waters where did the living running and hunting person go His questioning was by looking at the stars Because only yesterday she was out there hunting with him and looking after his children What had happened to him then that he could not move speak or react Therefore the perception of death is not new to the evolutionary scene It is very likely that it emerged when hominids began to pretend to be someone else to see their own reflection in the water or to remember their dreams But when exactly There is no one you can answer a question like In the later periods when socialization increased with living in groups death began to pass into both mythologies and written documents as a part of life We begin to see the first written documents about death in the Egyptian society that lived on the banks of the Nile 3500 years ago and then it became a subject in different ways in Sumer Assyria Hittite and all other societies On the other hand the concept of death and after death creates an inseparable

unity of questions and question marks seem to lie back to back Where death is mentioned the discussion of an afterlife which starts with death and giving life is also going on With the emergence of monotheistic religions death and afterlife became one of the most important parts of theology for a long time since the afterlife became the promised life With the birth of not only theology but philosophy it became one of the longest and most important topics of discussion Although it was suggested by some philosophers that it would not be the subject of philosophy because it does not belong to life it has become one of the important and even essential topics of philosophy arising from the mind brain soul body discussions For centuries the mind brain and soul body debates continued and still do Although the main question philosophy seeks to answer is how the mind brain connection is achieved whether there is a mind separate from the material flesh and brain after all if there is a structure that exists apart from the material body whatever its name is mind consciousness or spirit what will happen with death comes after Life after death has been an area of interest not only for religions but also for spiritualism and this interest has led to the birth of modern parapsychology Although this trend which started in the West in the 1800s began to reach its consistency in the late 1950s in our country the concept of the afterlife and death remained the main area of interest of spiritualism The answer they were looking for what kind of continuity is there in the afterlife has provided a more moderate approach to the subject of death for the limited number of people who are interested in the subject although they do not directly examine what death is Many professionals have emerged who are committed to learning from the spirits of the psychic dead and understanding the order of the other side Among them there were people who were educated in scientific knowledge schools and even received the Nobel Prize The experiences at the moment of death and the extraordinary events that took place during the deaths were recorded It was tried to be put together in a frame and mold For a long time death was ignored by western philosophers and it was not considered and systematically examined considering it a subjective situation close to metaphysics Even the famous Wittgenstein claimed in his Tractatus that death is not an event of life and that it cannot be talked about meaningfully For example Spinoza says in his Ethics that the free person does not think about death he contemplates on life This saying is also an escape On the other hand for some death is the real muse of philosophy and they mostly focused on concepts such as death anxiety what death is and how people learn about death Conversely August Comte said that if there is only one philosophical truth it is death Socrates accepted philosophy as preparation for death According to him philosophy would not be easily possible without death Voltaire on the other hand says that we do not know what eternal life is while present life is a terrible joke He points out that the human species is the only species that is aware of death and knows that it will die when the day comes Tirasaymakos on the other hand makes a remarkable emphasis in Philalethes speech If my individuality does not continue I will not even give metallicity to what you mumble about as immortality He is right but in today's sense individuality means our personality our memory of experience and our awareness of ourselves The other world where this does not exist must not be very desirable More recently the issue of death has

become an area of interest in medicine due to the development of organ transplants and the demand for organ harvesting from deceased people. Because organs could be taken from people who died, not from living people, and what exactly death meant had to be defined for physicians. For this purpose, brain death diagnostic criteria were started to be developed by neurologists in the not too distant 1970s. Although these criteria have changed over time, the concept of brain death as a general pattern has settled in medicine and has been accepted as the legal definition of death. The diagnosis of brain death meant death medically and legally, and the same nomenclature is still valid today, except for some minor details. Again, developing health technologies improving the storage conditions of tissues taken from humans and after many animal experiments, can we freeze humans and keep them in order to wake them up again in the future? Approaches emerged. The same question was asked: whether it could be done by putting astronauts or passengers to sleep with some kind of deep cooling during sending humans to Mars or distant planets. In this case, the freezing process which was applied required a definition of death as it required a starting point. On the other hand, people paid money to wake up after death by freezing himself whole body or just the head in the hope of being cured sometime in the future. Body ice cream companies were established in different parts of the world. It required a reconsideration of the concept of death when it started as it had to be applied legally as soon as the diagnosis of death was made. Parapsychologists were interested in near death experiences, but for the last ten years, physicians working in hospitals have also started to take part in research topics. Discussions began to be published in scientific journals on the subject about why near death experiences could occur and what could happen in the brain neurologically, physiologically, and chemically at that time. In other words, death and near death experiences can also be revealed and researched with the scientific method. In this way, we have come to understand better a concept called clinical death which has been emphasized. We have added clinical death to the concept of brain death. Spiritualism continues to be a subject of interest and discussion today as it was in the past. Aside from saying "I used to be this, you are not my parents when children are 3-4 years old," self helpers and regression healers have come to the point of giving people one or more past lives as gifts. The immortality implied by the rebirth cases and the state of being reincarnated in the world after death continue to be an important belief issue both in our country and in the world even today. It is a matter of both belief and debate among people at all levels of education. More recently, recordings of cerebral blood flow and brain waves (EEG) of deceased persons at the time of death were made and these were published and presented to other scientists for their opinions. However, physical and physiological examination of deceased persons at the time of death is a very rare situation in science, and the first experiments were carried out almost a hundred years ago. It was reported in the newspapers that 21 grams were lost from the body with death. Even if the film was made in the intervening time, the scientific confirmations did not give the same result. But when the movie was released, the 21 grams issue occupied the minds and asked: Is the soul only 21 grams? Oh, does it only weigh as much as a piece of chocolate had been asked. Since quantum physics pervades our daily lives, its implications

have made us rethink the issue of death and extinction I haven't observed the same thing for quantum physicists at universities dealing with solid matter A hundred years ago everything was a particle Then it was introduced into our minds that there were no particles but only concentrations of energy Today however we understand that neither particles nor energy concentrations Everything that makes up matter is actually information and temporary existences in the universal quantum field or wave function At that time our structure is not a decaying depleted matter but a structure that has continuity according to quantum physics but only transitions from state to state In this case what would be the meaning of bodily or cerebral death The question was asked and comments were written and drawn by opening the curtain on life after death Therefore the meaning of the word death began to be perceived and felt differently Today the issue of death is one of the most important issues in the minds of modern people whether they live in the village or in the city However it is discussed in the secret subconscious but in open conscious conversations Although most people do not talk about the subject you must have had a mandatory recollection of death either at night or during the death of their relatives or during the burial You have probably asked yourself one or more of the questions you will see in the chapter titles of our book not just remembering You've probably just asked yourself and silently Unbeknownst to anyone Even while thinking about death in your mind you must have thought quietly so that death would stay away In this book we will begin to find answers to questions about death in the minds of readers and perhaps even unintentionally to create new questions We can cause some people to reconsider the truths they believe in Our main aim is to consider and discuss death by considering more scientific information today without ever addressing the theological concept of death and the afterlife The question of why theological debates do not exist in this book is a separate issue and is of interest to theologians In this land where tradition and religion are almost inextricably intertwined thankfully many academic theologians in our universities can make this distinction very well from the perspective of the Qur'an it would be best not to discuss religion and death the afterlife For example a subject such as the promise of Paradise for Abraham is not covered in detail in the book Another issue is what a neurologist who is the author of this book can have to do with death Neurology is a field of medicine dealing with brain and spinal cord diseases After all I am one of the mortals On the other hand neurologists are one of the specialties that diagnose medical death and brain death Neurologists are the first to give consent for organ transplantation when the diagnosis of brain death is made Neurology is one of the specialties with the highest number of deaths and deaths in hospitals Apart from that near death experiences out of body experiences and some other abnormal death related phenomena are related to the nervous system and brain Perhaps most importantly neurologists who are scientists deal with the concepts of consciousness memory and personality All of these things somehow originate in the brain and what happens to them when the brain dies are a question on the neurologist's mind For this reason the neurologist who is a physician and scientist does not ask or even can ask where the soul goes when he dies he asks whether consciousness memory personality continues The question to ask is do we die

when we die And proving that our existence continues after death means revealing the most important secret for us After all you are mortal as a living being that comes to life When we are born and even from the mother's womb there is a seal on our butt mortal Since we are created and in other words we are not creators we will die According to the Islamic religious belief we will be laid alone on the musalla stone we will be buried under the ground alone Even further our universe will face death at some future time A very dark and incredibly cold universal death Other Realm Research Periods It is possible to divide the researches on the other world into four time periods These periods can be grouped as 1880-1930 1930-1960 1960-1990 and 1990 to present It is the first period between 1830-1930 It is the period of collecting classifying and analyzing the spontaneous experiences of people who have seen the ghosts of dead people The accumulation of knowledge that started with psychics also coincides with this period As the 1930s approached many case examples were accumulated and concepts such as extrasensory perception and super psi were written Although parapsychology resorted to experimental methods between 1930 and 1960 many parapsychologists did not engage in much research and experimentation on the afterlife It can be said that they even neglected such a topic While this period in the West was the period of experimental parapsychology in our country the spiritism movement that was about to end in the West Dr It is the period when it started to grow with Bedri Ruhselman In the next period Dr Ruhselman sifted his flour on spiritism and hung his sieve He had left behind enough knowledge Between 1960 and 1990 methods were developed to prevent telepathy from their living relatives in an effort to gather information from beyond death Information was collected by these methods Death has become the subject of science Especially with the start of organ transplants definitions of what death is and the concept of brain death began to be made Although science was not interested in the afterlife parapsychologists continued to gather information Between 1985 and 1995 many people were trained and emerged in the field of parapsychology in our country New associations were formed and many publishers emerged Since the 1990s the otherworld has continued to be the subject of philosophy and other research fields if not more positively of science In addition to the positive discussions quantum physics was also included in the event Personal developments also did not stay away from the event and made all efforts to send people to the beyond The concept of the afterlife is still one of the taboos for science Well memories can persist somewhere else that persists after physical death Because looking at some case reports some reported incidents should not exist if the materialism is true Darwin's theory of evolution cast doubt on the belief that man has a soul Despite this Alfred R Wallace one of the founding fathers of the theory of evolution was an ardent spiritualist and never deviated from his belief that human beings would exist after death Yet Darwin had encircled the throne on which the soul sat and brought it down But we know that the belief or idea that something resembling this life will continue forever and untimely in the afterlife continues to bother some Questions questions and questions Are you ready to ask aloud questions about death talk and discuss scientific information Surprise and bewilderment are the most important stimulant sources that enable learning In your warm brain inside your

heads I m sure you have many questions and you don t have the answers What is the death that these people and I will experience Do I really die when I die Or is something going on Is it possible to remain Is there such a thing as I think therefore I am outside of our body Will my personality and memory remain the same after death When death knocks on the door does everyone have to open it or do some return from that door Does a person die because he is sick or because he is alive Is disembodied awareness possible Is there an experience without a brain Does the experience continue after death If it continues is it a continuation of our personality before we die In the next world will we be able to wake up here as we wake up every morning Believing in the afterlife means affirming eternal life but if time has an end how will it be Will we feel alive when our organic body is destroyed Do we change space with death or does our consciousness change environment or state Did we sanctify the afterlife because absence is not a bearable feeling Are near death or near death experiences real Are people who claim to be born again lying or are they mentally ill Soulless immortals are vampires real Are there ghosts that cause spirits to cause confusion in this world Is the life after death only virtual like walking in one s own mind or is it an objective life Will we remember our memories before we die Will it be a private world or a public and open world to all Will everyone have their own dream Is it beyond the knowledge of positive science that works with the senses Can science claim that there is no continuity after death Is burning in hell more acceptable than non existence Is it death that really scares people or is it the possibility of our existence being completely lost Where is the other world as space If the existence of the other world is confirmed will it be necessary to change the marriage vows to forever not until death do us part If we get conclusive evidence that psychics connect with the souls of the deceased on the other side wouldn t we have to develop a new law on the legal rights of the deceased on this side On the other hand if the famous scientists who died are not going to stay in the other world and they pursue discovery and invention there how will the patent right be provided When the certainty of life after death is revealed how will we respond to people who intend to commit suicide and who want death euthanasia in incurable illness and what will be its place in law Again when psychiatric patients come to psychologists and psychiatrists how many souls will they bring with them How will the visit fee be determined in this case and from whom will it be requested There are also questions about the desire for immortality and the psychology of death What psychology enters someone who learns that you have a deadly disease and that you have a number of days left and what stages does he go through emotionally Is the sadness that we mourn after the death normal How long does it take how long does it take to become a diseased condition Even if I cannot become immortal one day if I keep the genetic codes of my brain unchanged can I be brought back to life hundreds of years from now If I want to freeze my brain or body in time so that it does not change is the price different The death words and questions that I write a lot I recommend you to read this book again Because from the beginning of the topic until the time you read it except you 100 people died in the world and 1 person in Turkey Although the world population is constantly increasing and cities are more crowded this does not mean that there are

no deaths The numbers are only increasing because the birth rate is higher than the death rate Cities are growing In the next 100 years the current world population of 7 215 731 300 people will die With the open number these seven billion two hundred and fifteen thousand imperfect people will be included in this number as the author of this book and you as the reader But we re going to die somehow from heart disease but from cancer but from a stroke in the brain or some other disease One end of the storyboard is birth the other end is death Are you ready to watch the end of the movie
