### **Annotated Bibliography**

I work as an O/A in an ophthalmology clinic that deals with a lot of elderly patients that have glaucoma or cataracts. Many of the patients don't understand what their diagnosis, how to treat it, or how often they should be taking their medications. I experience this first hand when they tell me that the doctor didn't do a very good job at explaining their eye drops, medications, diagnosis, treatment options, etc. When they don't know how to take their eye drops properly it causes their eye pressure to exceed normal limits and they end up needing surgery. This could have been avoided if they would've asked the doctor questions when they didn't fully understand or write down what the doctor had told them. Although this problem mainly affects elderly patients, not everyone always fully understands what they are told at the doctor and are usually too afraid or ashamed to ask questions. This leads us to the question: is the low health literacy in patients affecting their healthcare?

Boodman, S. G. (2011, March 1). Helping Patients Understand Their Medical Treatment. Retrieved November 5, 2019, from <https://khn.org/news/health-literacy-understanding-medical-treatment/>.

Sandra G. Boodman, a medical reporter for the Washington Post, talks about Americans' alarmingly low levels of health literacy – the ability to obtain, understand and use health information. In her 2011 article, "Helping Patients Understand Their Medical Treatment," Boodman talks about a study by the U.S. Department of Education that found that 36 percent of adults have only basic or below-basic skills for dealing with health material. Which means that 90 million Americans can understand discharge instructions written only at a fifth-grade level or lower. Boodman states that studies have linked poor health literacy, which affects the elderly, the poor, and recent immigrants, to higher rates of hospital readmission, expensive and unnecessary complications, and even death. A 2007 study estimated the problem cost the U.S. economy as much as \$238 billion annually, notes Boodman. She reports that experts predict efforts to boost health literacy may benefit even the minority who are proficient. "People worry about dumbing things down, Brach said, but in the research, no one has ever complained that things were too simple. Everybody wants clear communication," notes Boodman.

This article represents the viewpoint that low health literacy affects a patient's healthcare and states that it leads to higher rates of hospital readmission, expensive and unnecessary complications, and even death. The author uses many credible studies to illustrate her point. The article is directed towards healthcare professionals that can help with this ongoing issue. This
