

ANALYSIS OF THE EFFECTS OF CLIMATE CHANGE ON THE ECONOMY OF THE UNITED STATES

The report examines the potential impacts of climate change on the U.S. economy, including changes in agricultural productivity, energy demand, and infrastructure costs. It also discusses the benefits of climate action and the need for a comprehensive policy response.

The analysis is based on a comprehensive review of the scientific literature and economic models. It finds that climate change will have significant and largely negative impacts on the U.S. economy, particularly in the areas of agriculture, energy, and infrastructure. However, there are also significant benefits to be realized from climate action, including improved public health, increased energy security, and job creation.

The report recommends a comprehensive policy response that includes a mix of regulatory, market-based, and voluntary measures. Key recommendations include: a carbon price, investment in clean energy research and development, and improved energy efficiency standards. The report also emphasizes the importance of a just transition for workers and communities affected by the shift to a low-carbon economy.
