

5 STEPS to STUDY SUCCESS

We've done the homework on studying so you don't have to. These are your scientifically proven steps to study success.

1 NOT ALL STRESS IS BAD

While it's often given a bad rap, the right amount of stress can actually motivate you to get stuff done. The key thing is to recognise when stress has tipped over from being a motivating force to an overwhelming emotion.

3 SAY IT OUT LOUD

The best way to really remember and learn is to talk about what you're learning out loud, without using any notes.

4 BREAKS = GOOD, CONSTANT DISTRACTION = BAD

Taking planned and timed breaks will help you remain on task, but checking your social every 5 minutes is a sure-fire study fail. Research shows that it can take up to twenty minutes to refocus on your task once you've been distracted.

2 20-MINUTE STUDY RULE

No one can study for six hours straight and be effective. Break up your time into twenty-minute chunks for the most effective use of your brain.

5 SLEEP IS YOUR FRIEND

If you get a good night's sleep before your exam, you are scientifically proven to retain more of what you studied the day before than if you stay up crazy late.

The Clinical Management of Nicotine Dependence James A. Cocores, 2012-12-06 The 1980s have seen a remarkable degree of public and professional acceptance of cigarette smoking as the most widespread and devastating form of drug dependence More medical schools now give required courses about drug dependence Prestigious journals publish reports of investigations on the subject of nicotine dependence and more conferences and workshops are held each year on various aspects of nicotine dependence All this is in sharp contrast to the earlier prevailing atmosphere of disinterest ignorance or professional disdain These changes created an obvious place for a textbook oriented primarily toward the needs of clinicians working with patients who have nicotine dependence Thus in preparation of this book most aspects of the management of nicotine dependence are incorporated in order to address concerns of physicians in training and other health care professionals across the world The final product which I believe to be comprehensive and clinically relevant throughout is a text that I hope will be of equal use to psychologists social workers nurses counselors and physicians in all specialties An encyclopedic treatise was deliberately avoided because that approach can be cumbersome in size readability and cost and for that reason readers will find little mention of data involving animal research nicotine related politics nicotine product advertising medical consequences of smoking psychotherapeutic techniques and the extent of the problem
