that make rich and increasingly personalized applications possible It serves as a valuable resource for researchers and practitioners working in the increasingly pervasive field of broadband *Internet, Economic Growth and Globalization* Claude E. Barfield,2003-02-27 The dynamics of the digital economy in the US Europe and Japan are rather different Some EU countries come close to the USA as the leading OECD country in the new economy but Japan faces particular problems in catching up digitally Information and communication technology will affect productivity growth production the financial system and trade Setting adequate rules for the digital economy at the national and international level is a key challenge for industrialized countries Moreover cultural and organizational challenges will also have to be met *Next-Generation Internet* Byrav Ramamurthy,George N. Rouskas,Krishna Moorthy Sivalingam,2011-02-03 With ever increasing demands on capacity quality of service speed and reliability current Internet systems are under strain and under review Combining contributions from experts in the field this book captures the most recent and innovative designs architectures protocols and mechanisms that will enable researchers to successfully build the next generation Internet A broad perspective is provided with topics including innovations at the physical transmission layer in wired and wireless media as well as the support for new switching and routing paradigms at the device and sub system layer The proposed alternatives to TCP and UDP at the data transport layer for emerging environments are also covered as are the novel models and theoretical foundations proposed for understanding network complexity Finally new approaches for pricing and network economics are discussed making this ideal for students researchers and practitioners who need to know about designing constructing and operating the next generation Internet **Broadband Services** Imrich Chlamtac,Ashwin Gumaste,Csaba Szabo,2005-06-14 Access to the Internet is an increasing problem in many areas of the world As the popularity and usefulness of the Internet increases on a daily basis lack of access to the technology is putting many groups at a disadvantage in terms of better education better jobs and even in terms of higher levels of civic participation However creating a network infrastructure to serve outlying communities and sectors of the population is not straight forward This book brings together all the aspects of the problem technical regulatory and economic into one volume to provide a comprehensive resource It describes the latest technological advances that allow cost effective network infrastructures to be built and places them in the context of the applications and services that the infrastructure will deliver A section on business models and case studies from North American and Europe demonstrate that the solutions are economically and practically viable This book is essential for anyone looking to gain an understanding of the issues and technology surrounding the access debate It will be of particular relevance to network engineers designers planners at the incumbent operator companies charged with delivering broadband access to as yet unconnected regions Governments and regulatory bodies will also find this a useful guide to the problems that they may face Fixed Wireless Monthly Newsletter , Broadband Access Technologies, Including IMT, for Developing Countries International Telecommunication Union,2017 This report covers an analysis of factors influencing the effective deployment of

Wireless Versus Wireline - Competing Broadband Access Technologies Mukesh Kumar,2014 Compared to wireless access technologies wireline access technologies give better performance in terms of bandwidth as well as quality of service but they lack ubiquity and affordability Wireless networks can be deployed much faster with less initial investment and costs of service provisioning network maintenance are also less Although some of the equipment and electronics cost have declined the cost of civil engineering cell site acquisition and laying fiber or copper cables remain high It is therefore imperative to undertake cost versus benefit analyses when considering the deployment of wireless versus wireline access

networks This article first delves upon the advantages and disadvantages of the selected wireline and wireless broadband access technologies and thereafter discusses the various factors influencing the decision of the SP as well as the State in zeroing in on a particular access technology or mix of two or more access technologies for deployment in a particular region at any point time particularly under Indian context
