Conifers Action Plan:

Conifers Aljos Farjon, Christopher Nigel Page, 1999 Conifers are one of the world's most important resources of timber. If managed wisely and used sustainably these resources will provide wood for a multitude of purposes virtually indefinitely. Additional products include resins and their derivatives and even medicinal extracts for example taxol now used in the treatment of cancer. Conifers occur on all continents except Antarctica. Of the 630 species 355 are listed as of conservation concern with 200 or 25 of species threatened with extinction. Although exploitation of these resources is as old as civilization this century has seen a dramatic increase in the exploitation of timber resources. This action plan assess conifer diversity and its threats. It is unique among IUCN's Plant Action Plans so far published in that it gives the complete global red list of conifers using the 1994 IUCN Red List Categories and criteria. Data is analyzed to identify conifer hot spots where conservation should be a priority and a short list of threatened species is prioritized. *Conifers* Ana Cristina Gonçalves, 2018-12-05 The conifer tree can lead to a wide variety of products and services. Overall the evaluation, management and planning of the multiplicity of these forest systems requires effective and specific methods and tools in a sustainable frame of the systems and of their products and services. This book reflects the current research on conifer stands and forests. The authors, specialists in different areas, addressed several issues in forest science focusing on the species characteristics, silviculture and climate change, growth analysis, reconstruction of stand dynamics of mixed stands, establishment, regeneration and succession, litter fall, nutrient cycle and silviculture, distribution and zonation and ecosystem services provided by monocultures and mixed stands. **A Natural History of Conifers** Aljos Farjon, 2008-01-01 A compelling account of the extraordinary relatives of ordinary garden conifers. Leading expert Aljos Farjon provides a compelling narrative that observes conifers from the standpoint of the curious naturalist. It starts with the basic question of what conifers are and continues to explore their evolution, taxonomy, ecology, distribution, human uses and issues of conservation. As the story unfolds many popular misconceptions are dispelled such as the false notion that all conifers have cones. The extraordinary diversity of conifers begins to dawn as Farjon describes the diminutive creeping shrub *Microcachrys tetragona* whose strange seed cones resemble raspberries and the prehistoric looking *Araucaria meulleri*. The taxonomic diversity of conifers is huge and Farjon goes on to relate how over the course of 300 million years these trees and shrubs have adapted to survive geological upheavals, climatic extremes and formidable competition from flowering plants. All who seek to learn more about the early history of life on our planet will cherish this book. **Forests And Forest Plants - Volume II** John N. Owens, H. Gyde Lund, 2009-02-24 *Forests and Forest Plants* is a component of *Encyclopedia of Food and Agricultural Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS)* which is an integrated compendium of twenty-one encyclopedias. Forests are an essential part of Earth's life support systems. Forest resources are essential for humankind. They provide both vital goods and services. They provide food, fuel, shelter, soil

and water protection and filter the air we breathe This publication on Forest and Forest Plants provides the user with such information as to create an awareness of the value of our forestlands and the products and environmental services they provide The three volumes on Forests and Forest Plants are organized starting with first the necessity of the World s Forest Resources including classification and distribution of forest urban forestry and agroforestry Important Tree Species including trees in reclamation and arid zone forestry Forests and Forest Products including wood and non word products the Role of Forests in the Biosphere preserving biological diversity functions in the hydrological cycle etc and Conservation and Breeding of Forest Trees what is being done to improve our forest resources silviculture tree nurseries and forest protection The theme Forest and Forest Plants has led to the conclusion that there are substantial difficulties in matching environmental concerns and sustainability with an ever increasing world population Thus there is a tension between maximizing for food wood and production on the one hand and implementing sustainable development and environmental protection on the other These three volumes are aimed at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers NGOs and GOs
