King, 2013-04-17 The purpose of this and future volumes of the Handbook of Genetics is to bring together a collection of relatively short authoritative essays or annotated compilations of data on topics of significance to geneticists Many of the essays will deal with various aspects of the biology of certain species selected because they are favorite subjects for genetic investigation in nature or the laboratory Often there will be an encyclopedic amount of information available on such a species with new papers appearing daily Most of these will be written for specialists in a jargon that is bewildering to a novice and sometimes even to a veteran geneticist working with evolutionarily distant organisms For such readers what is needed is a written introduction to the morphology life cycle reproductive behavior and culture methods for the species in question What are its particular advantages and disadvantages for genetic study and what have we learned from it Where are the classic papers the key bibliographies and how or mutant strains A list giving the symbols does one get stocks of wild type isolates for unknown mutations is helpful but it need include only those mutants that have been retained and are thus available for future studies Other data such as up to date genetic and cytological maps listings of break points for chromosomal aberrations mitotic

Progress in Holomorphic Dynamics Hartje Kriete, 1998-05-20

In the last few decades complex dynamical systems have received widespread public attention and emerged as one of the most active fields of mathematical research

Starting where other monographs in the subject end

Progress in Holomorphic Dynamics advances the theoretical aspects and recent results in complex dynamical systems with particular emphasis on Siegel discs

Organized into four parts the papers in this volume grew out of three workshops two hosted by the Georg August Universität Göttingen and one at the Mathematisches Forschungsinstitut Oberwolfach

Part I addresses linearization

The authors review Yoccoz's proof that the Brjuno condition is the optimal condition for linearizability of indifferent fixed points and offer a treatment of Perez Marco's refinement of Yoccoz's work

Part II discusses the conditions necessary for the boundary of a Siegel disc to contain a critical point builds upon Herman's work and offers a survey of the state of the art regarding the boundaries of Siegel discs

Part III deals with the topology of Julia sets with Siegel discs and contains a remarkable highlight

C. L. Petersen establishes the existence of Siegel discs of quadratic polynomials with a locally connected boundary

Keller taking a different approach explains the relations between locally connected real Julia sets with Siegel discs and the abstract concepts of kneading sequences and itineraries

Part IV closes the volume with four papers that review the different directions of present research in iteration theory

It includes discussions on the relations between commuting rational functions and their Julia sets interactions between the iteration of polynomials and the iteration theory of entire transcendental functions a deep analysis of the topology of the limbs of the Mandelbrot set and an overview of complex dynamics in higher dimensions
