Conscious Experience:

Conscious Experience W.H. Sparks, 2014-06-27 The fundamental principles that explain the heretofore mysterious phenomena of consciousness are 1 Consciousness is energies of the environment and energies developed in intrafusal muscle spindles are conscious experience and 2 the experience occurring as the developed energies depending on purpose and intensity are detected by muscle receptors The conscious experience occurs as perception the experience of the environment imagery imagination memory and dreams feelings emotion or when agreed to the meanings of language Consciousness and conscious experience are not subject to the interpretations of scientific and religious knowledge because consciousness is the individual experience of each and every person In *Conscious Experience* author W H Sparks presents a discussion of the relationship of consciousness and experience based on his extensive research and his personal experiences Along with a review of the development of the theory of consciousness Sparks offers a plethora of facts and thoughts about conscious experience including An explanation of the nature and experience of consciousness How the experience of energies detected by receptors constitutes conscious experience The idea that conscious experience is detected as the energies developed in the intrafusal spindles by muscle receptors How consciousness is experienced by the muscle system The structures of experience are the intrafusal muscle spindles The impulse activity transduced from the detected energies innervates the muscle system The recognition of the part the muscle receptors play in conscious experience is the process that finally answers the question of consciousness and conscious experience In the *Conscious Experience* Sparks provides information that shows conscious experience includes perception imagery feelings and the meanings of language all qualities unique to each individual

[Language and Conscious Experience](#) W. H. Sparks, W.H. Sparks, 2010-02 *Language and Conscious Experience* is a philosophical theory of consciousness The book presents a theory that accommodates every aspect of consciousness and conscious experience The aspects referred to are perception imagery including memory and dreams feelings emotion and the acquisition and development of language including the origination of meaning The nature of consciousness is the energies detected by sensory receptors The nature of conscious experience is the detection by spindle receptors of energies developed and enhanced in intrafusal muscle spindles We experience the environment in the form of sensations sight hearing taste smell and touch to use the common and traditional identifications Consciousness is experienced by the detection of intrafusal muscle spindles The spindle receptor detection is analogous to the detection of the environment by sensory receptors The difference of course is that we are conscious as the detection of the intrafusal spindles The purpose of the neuromuscular system is response to the energies of the environment The purpose of the intrafusal spindles is to control the neuromuscular system Efferent impulse activity from synaptic activity enhances the intrafusal spindles that can then be detected as conscious experience Energies developed in the intrafusal spindles are determined by the innervation of the system When enhanced from configured synaptic activity the innervation is modified by the synaptic

activity configured by experience **Conscious Experience** Thomas Metzinger,1995 The contributions to this book are original articles representing a cross section of current philosophical work on consciousness and thereby allowing students and readers from other disciplines to acquaint themselves with the very latest debate so that they can then pursue their own research interests more effectively The volume includes a bibliography on consciousness in philosophy cognitive science and brain research covering the last 25 years and consisting of over 1000 entries in 18 thematic sections compiled by David Chalmers and Thomas Metzinger The Basic Theory of the Mind Dr. Chirapat Ukachoke,2024-10-10 This book offers a rigorous exploration into the nature of the mind through the lens of empirical evidence Moving beyond abstract speculation the book dissects the essential architecture of the mind mental processes qualia and consciousness and proposes a formal scientific theory complete with verifiable theorems on what the nature of these entities is The book also proposes a scientific solution to the Hard Problem explaining both the how and the why qualia and consciousness occur in the brain and physical systems in general Related crucial matters information variable qualia and philosophical zombies are also examined Information especially is investigated in detail that can provide a basis for a more general theory of the mind **The Nature of Experience** W. H. Sparks,2011-11-23 This study identifies the structures and processes that create consciousness and the conscious experience The expression of perceptions memories dreams and emotions develop and are enhanced in intrafusal muscle spindles These expressions in many cases are common to us all We experience the environment as reality in the form of sensations sight hearing taste smell and touch to use the common and traditional identifications Consciousness is experienced in the intrafusal muscle spindles The fundamental purpose of the spindles is to control the muscular system The process of control is the detection of the energy by a second set of receptors the spindle receptors The second set of receptors is critical to an explanation of the theory and serves to explain what heretofore has been the unknown factor in conscious experience the experience of consciousness The spindle receptor detection is analogous to the detection of the environment by sensory receptors The difference of course is that we are the intrafusal spindles detected by the spindle receptors It is the efferent impulse activity from the congenitally and experientially configured synaptic activity that enhances the energies developed in the spindles as experience This process is necessary for the experience of consciousness and the effective control of behavior For centuries man has reflected upon the conscious nature of the human species The Nature of Experience offers a new perspective on this eternal question **Cognitive Phenomenology** Tim Bayne,Michelle Montague,2011-11-24 The central concern of the cognitive phenomenology debate is whether there is a distinctive cognitive phenomenology that is a kind of phenomenology that has cognitive or conceptual character in some sense that needs to be precisely determined This volume addresses the question of whether conscious thought has cognitive phenomenology **Encyclopaedia Britannica** ,1891 **The Unfolding of Personality as the Chief Aim in Education** Harry Thiselton Mark,1910 **The Theosophical Review** ,1904 Psyche ,1924 **Psychic Research Quarterly** ,1924 **Mind** ,1908
