**Consciousness** Susan J. Blackmore,2013 Is there a theory that explains the essence of consciousness Or is consciousness itself just an illusion The last great mystery of science consciousness is a topic that was banned from serious research for most of the last century but is now an area of increasing popular interest as well as a rapidly expanding area of study for students of psychology philosophy and neuroscience This ground breaking textbook by best selling author Susan Blackmore was the first of its kind to bring together all the major theories of consciousness studies from those based on neuroscience to those based

*Consciousness* Adam Zeman,2002-01-01 Waiting for Godot has been acclaimed as the greatest play of the 20th century It is also the most elusive two lifelong friends sing dance laugh weep and question their fate on a road that descends from and goes nowhere Throughout they repeat their intention Let s go but this is inevitably followed by the direction They do not move This is Beckett s poetic construct of the human condition Lois

Gordon author of *The World of Samuel Beckett* has written this introduction to Beckett's great work for general readers, students and specialists. Critically and historically informed, it approaches the play scene by scene, exploring the text linguistically, philosophically, critically and biographically. Gordon argues that the play portrays more than the rational mind's search for self and worldly definition. It also dramatises Beckett's insights into human nature into the emotional life that frequently invades rationality and liberates, victimises or paralyzes the individual. Gordon shows that Beckett portrays humanity in conflict with mysterious forces both within and outside the self and that he is an artist of the psychic distress born of relativism.

**The Extension of Consciousness** C. W. Olliver, 2013-10 This is a new release of the original 1932 edition.

**Theories of Consciousness** William Seager, 2002-01-31 The most remarkable fact about the universe is that certain parts of it are conscious. Somehow nature has managed to pull the rabbit of experience out of a hat made of mere matter. Making its own contribution to the current lively debate about the nature of consciousness, *Theories of Consciousness* introduces a variety of approaches to consciousness and explores to what extent scientific understanding of consciousness is possible. Including discussion of key figures such as Descartes, Fodor, Dennett and Chalmers, the book covers identity theories, representational theories, intentionality, externalism and the new information-based theories.

*The fabric(ation) of consciousness* Pieter F. Craffert, 2024-05-28 Consciousness is central to the quest for being human and for what the world is made of. While there is widespread agreement on the significance of consciousness for clarifying the human condition, there is no agreement on the phenomenon in search of theorising. Although there is no shortage of theories and concepts of consciousness in current consciousness research, the dominant critical analysis of consciousness research in this study, although based on existing analyses, is as far as I can see new and unique in arguing for a crisis in consciousness research. This book touches on most aspects of consciousness research: the hard problem of consciousness, neural correlates of consciousness, brain models and consciousness, consciousness and dualistic thinking etc, but is a critical analysis of consciousness research. It is not an insider but a third person perspective on current consciousness research. In this regard, it differs from most introductions and overviews where these topics are presented from a first person perspective; the insiders claim about their research. Representing the broad spectrum of consciousness research in terms of the theoretical framework of a neuro-ecological perspective is a new and innovative move.

**An Introduction to Philosophy** Edgar Sheffield Brightman, 1925

**The Blackwell Companion to Consciousness** Max Velmans, Susan Schneider, 2008-04-15 With fifty-five peer-reviewed chapters written by the leading authors in the field, *The Blackwell Companion to Consciousness* is the most extensive and comprehensive survey of the study of consciousness available today. Provides a variety of philosophical and scientific perspectives that create a breadth of understanding of the topic. Topics include the origins and extent of consciousness, different consciousness experiences such as meditation and drug-induced states, and the neuroscience of consciousness.

*Introduction to Psychology* Robert Mearns Yerkes, 1911

*The Neurology of Consciousness* Steven

Laureys, Giulio Tononi, 2011-04-28 Understanding consciousness is the major unsolved problem in biology One increasingly important method of studying consciousness is to study disorders of consciousness e g brain damage and disease states leading to vegetative states coma minimally conscious states etc Many of these studies are very much in the public eye because of their relationship to controversies about coma patients e g Terry Schiavo case in the US recently and the relationship to one of the major philosophical sociological political and religious questions of humankind This is the first book to summarize our current understanding of the neuroanatomical and functional underpinnings of human consciousness by emphasizing a lesional approach offered via the study of neurological patients The selected contributors are all outstanding authors and undisputed leaders in their field New chapters on the neuroanatomical basis of consciousness functional intrinsic brain activity anesthesia as well as expanded coverage of the unresponsive wakefulness syndrome vegetative state and the minimally conscious state The first comprehensive authoritative collection to describe disorders of consciousness and how they are used to study and understand the neural correlates of conscious perception in humans Includes revised and new chapters from the top international researchers in the field **An Introduction to Psychology** Mary Whiton Calkins, 1902

**Brain States and Neural Mechanisms of Consciousness** Olivia Gosseries, 2022-09-30 **Consciousness** Susan J. Blackmore, 2005 A lively introduction that combines the perspectives of philosophy psychology and neuroscience written by the top name in the field Susan Blackmore **The Human Intellect, with an Introduction Upon Psychology and the Soul** Noah Porter (the Younger.), 1872 Introduction to the History of Modern Philosophy Arthur Stone Dewing, 1903 Friedrich Eduard Beneke, the Man and His Philosophy Francis Burke Brandt, 1895 An Introduction to Philosophy Holly Estil Cunningham, 1920
