Handbook of Individual Differences in Cognition Aleksandra Gruszka,Gerald Matthews,Blazej Szymura,2010-06-16 As cognitive models of behavior continue to evolve the mechanics of cognitive exceptionalism with its range of individual variations in abilities and performance remains a challenge to psychology Reaching beyond the standard view of exceptional cognition equating superior intelligence the Handbook of Individual Differences in Cognition examines the latest findings

from psychobiology cognitive psychology and neuroscience for a comprehensive state of the art volume Breaking down cognition in terms of attentional mechanisms working memory and higher order processing contributors discuss general models of cognition and personality Chapter authors build on this foundation as they revisit current theory in such areas as processing effort and general arousal and examine emerging methods in individual differences research including new data on the role of brain plasticity in cognitive function The possibility of a unified theory of individual differences in cognitive ability and the extent to which these variables may account for real world competencies are emphasized and commentary chapters offer suggestions for further research priorities Coverage highlights include The relationship between cognition and temperamental traits The development of autobiographical memory Anxiety and attentional control The neurophysiology of gender differences in cognitive ability Intelligence and cognitive control Individual differences in dual task coordination The effects of subclinical depression on attention memory and reasoning Mood as a shaper of information Researchers clinicians and graduate students in psychology and cognitive sciences including clinical psychology and neuropsychology personality and social psychology neuroscience and education will find the Handbook of Individual Differences in Cognition an expert guide to the field as it currently stands and to its agenda for the future

**The Mind Within the Brain** A. David Redish, 2013-08 With verve and humor in an easily readable style David Redish brings together cutting edge research in psychology robotics economics neuroscience and the new fields of neuroeconomics and computational psychiatry to show how vulnerabilities or failure modes in the decision making system can lead to serious dysfunctions such as irrational behavior addictions problem gambling and PTSD Ranging widely from the surprising roles of emotion habit and narrative in decision making to the larger philosophical questions of how mind and brain are related what makes us human the nature of morality free will and the conundrum of robotics and consciousness The Mind within the Brain offers fresh insight into one of the most complex aspects of human behavior

Self-representational Approaches to Consciousness Uriah Kriegel, Kenneth Williford, 2006 Leading theorists examine the self representational theory of consciousness as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness and the higher order monitoring theory In this pioneering collection of essays leading theorists examine the self representational theory of consciousness which holds that consciousness always involves some form of self awareness The self representational theory of consciousness stands as an alternative to the two dominant reductive theories of consciousness the representational theory of consciousness RTC and the higher order monitoring HOM theory combining elements of both RTC and HOM theory in a novel fashion that may avoid the fundamental deficiencies of each Although self representationalist views have been common throughout the history of both Western and Eastern philosophy they have been largely neglected in the recent literature on consciousness This book approaches the self representational theory from a range of perspectives with contributions from scholars in analytic philosophy phenomenology and history of philosophy as well as two longer essays by Antonio Damasio

and David Rudrauf and Douglas Hofstadter The book opens with six essays that argue broadly in favor of self representationalist views which are followed by five that argue broadly against them Contributors next consider connections to such philosophical issues as the nature of propositional attitudes knowledge attention and indexical reference Finally Damasio and Rudrauf link consciousness as lived with consciousness as described in neurobiological terms and Hofstadter compares consciousness to the strange loop of mathematical self reference brought to light by Gödel's incompleteness theorems Contributors Andrew Brook Peter Carruthers Antonio Damasio John J Drummond Jason Ford Rocco J Gennaro George Graham Christopher S Hill Douglas R Hofstadter Terry Horgan Tomis Kapitan Uriah Kriegel Keith Lehrer Joseph Levine Robert W Lurz David Rudrauf David Woodruff Smith John Tienson Robert Van Gulick Kathleen Wider Kenneth Williford Dan Zahavi

Consciousness Jeffrey Alan Gray, 2006 How does conscious experience arise out of the functioning of the human brain How is it related to the behaviour that it accompanies How does the perceived world relate to the real world Between them these three questions constitute what is commonly known as the Hard Problem of consciousness Despite vast knowledge of the relationship between brain and behaviour and rapid advances in our knowledge of how brain activity correlates with conscious experience the answers to all three questions remain controversial even mysterious This important book analyses these core issues and reviews the evidence from both introspection and experiment To many its conclusions will be surprising and even unsettling The entire perceived world is constructed by the brain The relationship between the world we perceive and the underlying physical reality is not as close as we might think Much of our behaviour is accomplished with little or no participation from conscious experience Our conscious experience of our behaviour lags the behaviour itself by around a fifth of a second we become aware of what we do only after we have done it The lag in conscious experience applies also to the decision to act we only become aware of our decisions after they have been formed The self is as much a creation of the brain as is the rest of the perceived world Written by a leading scientist this accessible and compelling analysis of how conscious experience relates to brain and behaviour will have major implications for our understanding of human nature

**New Scientist and Science Journal**, 2004 Neuropsychedelia Nicolas David Langlitz, 2007 **New Scientist**, 2004 **The Psychologist**, 2008 **Consciousness** David Rose, 2006-02-02

Consciousness is a state of being aware of our self of our surroundings of our place in those surroundings What neural processes drive our awareness and how do these processes relate to what we think of as our mind David Rose seeks to respond to these questions taking a critical approach

**Fiction, Philosophy and Literary Theory** Christopher Norris, 2007-08-28 Bringing together three main topics deconstruction philosophy of language and literary theory Christopher Norris offers a clear and vigorous statement of his views as to how theory might profit from a greater awareness of current philosophical debates
