A short history of natural science Arabella Burton Fisher,1888 **How to Conquer Air Pollution** H.
Nishimura,1989-11-23 Many parts of the world suffer from urban air pollution and despite the vast amount of knowledge
about its causes most countries are slow to implement counter measures An outstanding exception is Tokyo which once
blanketed in a mantle of smog now enjoys clean air in spite of highly concentrated activity and congested traffic Based on the
successful Japanese experience this book describes all aspects of the measures necessary to combat air pollution It begins
with a well documented history of the fight against air pollution and describes the processes and mechanisms of reaching a
social consensus on pollution control The essential steps in the process are the establishment of ambient air quality
standards the introduction of the total allowable mass of emission and the legal control of each emission based on diffusion
equations The scientific background to this approach is fully explained from epidemiology to computer simulations of air
quality An up to date account of emission control technology is also given and the controversial issue of health damage
compensation is examined based on actual experience An important feature of the book is that it is written by authors who
were actually in the forefront of the battle against air pollution in Japan Two of them worked successively as Director General
of the Bureau of Air Quality of the central government and a third helped local governments to force the central government
to implement the most stringent auto emission controls in the world The book is intended not only for scientists engineers
and administrative planners dealing with pollution control but also for anyone concerned about the serious global problem of
