Consciousness Regained Nicholas Humphrey, 1983 *Making Minds* Professor Henry M. Wellman, 2014-10-09 Developmental psychologists coined the term theory of mind to describe how we understand our shifting mental states in daily life Over the past twenty years researchers have provided rich provocative data showing that from an early age children develop a sophisticated and consistent theory of mind by attributing their desires beliefs and emotions to themselves and to others Building on his pioneering research in *The Child's Theory of Mind* 1990 Henry M Wellman pulls together all that we have learned in the past twenty years to shine new light on how theory of mind develops

Children's Discovery of the Active Mind Bradford H. Pillow, 2011-11-23 During the past 25 years a great deal of research and theory has addressed the development of young children's understanding of mental states such as knowledge beliefs desires intentions and emotions Although developments in children's understanding of the mind subsequent to early childhood has received less attention in recent years a growing body of research has emerged examining understanding of psychological functioning during middle and late childhood Combined with the literature on adolescent epistemological development this research provides a broader picture of age related changes in children's understanding of the mind Guided by the goals of describing developmental changes in children's concepts of cognitive functioning and identifying sources of information that contribute to learning about cognition *Children's Discovery of the Active Mind* organizes empirical literature concerning the development of children's knowledge of cognitive activities from early childhood to adolescence and presents a conceptual framework that integrates children's introspective activities with social influences on development Bringing together theoretical and empirical work from developmental cognitive and social psychology the author argues that rather than depending upon a single source of information developmental progress is driven by combinations of children's conceptual knowledge of mental functioning children's phenomenological awareness of their own cognitive activities and children's social experience

Parenting Behaviour and Children's Cognitive Development Sara Meadows,2013-10-23 The association between parents behaviour and children s cognitive development is at the meeting place of several prominent theories of psychological development and a range of complex methodological and conceptual issues On the one hand there are theories which argue that the impetus of development is within the child and is largely unaffected by his or her experience of social interaction on the other are the commonsense experience of parents and educators and the body of neo Vygotskian theory which would see the child s development as profoundly affected by social interaction or even constituted by it The purpose of this book is to examine theories and evidence carefully in order to assess the causal links between parent behaviour and children s cognitive development There is a considerable amount of evidence that suggests an association between parents behaviour and their children s cognitive development but there are many possible explanations for this association including direct effects of parental teaching styles on the children s learning and motivation differential social class practices and opportunities genetic resemblances and methodological artifacts A close and critical look at a wide range of research and of theory is necessary if the causal questions are to be clarified This book develops the current arguments about the nature and causes of cognitive development providing a critical discussion of the available research and relating it to psychological theory It is suitable for advanced students of psychology and education

Cinematic Projections Luke Hockley,2001 An introduction to the world of postJungian film studies this book redresses the dominance of Freudian theories of cinema and guides individuals through the intricacies of Jungian thought In so doing it provides the basis on which to construct a contemporary theory of cinema Drawing on research into detective films and the myths of detection Hockley weaves together psychological analysis with textual interpretation The resulting hypothesis suggests that watching films is an intensely personal experience in which viewers according to individual needs and desires project and identify with films and their characters

How Do Brains Work? Theodore Holmes Bullock,1993 I ll bet it will turn out that brains use both mechanisms in different centers Much of my waking life and that of many of my friends is spent racking our brains over how brains work This book claims that good science is often a form of betting on the outcome of research the stakes being time and reputation and someone s money Some scientists to be sure claim they avoid leaning this way or that in the name of keeping an open mind I recommend making expectations explicit in order to design controls against unconscious influence formulate alternative outcomes more clearly and to add zest Both the immediately upcoming experiment and the expected result of many long years of work by many people after one is gone are proper subjects for betting or the most informed and serious guessing The working title for this collection of new and old papers was for some time Betting on how brains work and then Betting on brains It goes without saying that the book will not answer the title question but will speak to it in particular making a series of propositions that I think are more likely to be confirmed by future research than the alternatives we can presently recognize It follows that a significant message implied in many chapters of the book is this
