Social determinants of health Laurie Hinnant,Sara Hairgrove,Heather Kane,Jason Williams,Jessica Duncan Cance,2022-12-12 In recent years the number of publicly available tools and indices assessing social determinants of health SDOH has grown exponentially While many of these indices have been developed to assist researchers and practitioners with identifying vulnerable communities it is difficult to determine the most appropriate measure index or combination of indices to use given the research question of interest This paper presents an overview of the most commonly included indices highlights commonalities and identifies some differences in what they measure We also discuss challenges with using these measures including the use of state level data to examine local level

issues and how the use of atheoretical indices challenges the application of SDOH measurement Findings are intended to provide researchers and practitioners with information about SDOH data available through these common indices to inform how they are applied based on the needs of their work

**Social Determinants of Health**, 1999 *Social Determinants of Health* M. G. Marmot, Richard G. Wilkinson, 1999 *Social Determinants of Health* provides an authoritative overview of the social and economic factors which are now known to be the most powerful determinants of population health in modern societies Written by acknowledged experts in each field it provides accessible summaries of the scientific justification for isolating different aspects of social and economic life as the primary determinants of a population's health Recognition of the power of socioeconomic factors as determinants of health came initially from research on health inequalities This has led to a view of health as not simply about individual behaviour or exposure to risk but how the socially and economically structured way of life of a population shapes its health Thus exercise and accidents are as much about a society's transport system as about individual decisions and the nation's diet involves agriculture food manufacture retailing and personal incomes as much as individual choice But a major new element in the picture we have developed is the importance of the social or psycho social environment to health For example health in the workplace for most employees certainly office workers is less a matter of exposure to physical health hazards as of the social environment of how supportive it is whether people have control over their work whether their jobs are secure A similar picture emerges in other areas ranging from the health importance of the emotional environment in early childhood to the need for more socially cohesive communities In 1998 the European Office of the World Health Organization launched a campaign to encourage the public and policy makers to take action on the social determinants of health Members of the International Centre for Health and Society who advised the WHO Centre for Urban Health and produced the text for the campaign booklet have now produced *Social Determinants of Health* to provide the

scientific evidence behind the recommendations covering ten key areas of public policy Social Determinants of Health should be read by all those interested in the well being of modern societies It is a must for public health professionals for health promotion specialists and for people working in the many fields of public policy which we now know make such an important contribution to health

Perspectives on Health Equity and Social Determinants of Health Kimber Bogard, Velma McBride Murry, Charlee M. *Public Health Evaluation and the Social Determinants of Health* Allyson Kelley, 2020-05-07 Compelling evidence shows health disparities are the result of inequalities in income education limited access to medical care substandard social environments and poor economic conditions This book introduces these social determinants of health SDOH discusses how they relate to public health programs and explains how to design and evaluate interventions bearing them in mind Arguing that many public health programs fail to be as effective as they could be because they ignore the underlying causes of health disparities this important reference gives concrete examples of how evaluations focusing on the social determinants of health can alleviate health inequalities as well as step by step guidance to undertaking them This resource blends current research existing data and participatory evaluation methods It is designed for teachers students practitioners and policymakers interested in public health programming and evaluation

**Social Determinants of Health and Health Disparities** Paula Braveman, 2023 If you ask most people what influences health almost invariably the first reply will be health care the services that individuals receive from physicians nurses and other medical professionals to treat or prevent illness also called medical care Many people in fact presume the role of health care medical care in affecting health to be so predominant that they often use the terms health and health care interchangeably Many people would probably also cite behaviors such as diet exercise smoking and use of alcohol or drugs as key influences on health While ample evidence supports the importance of both health care and behaviors for health a compelling body of scientific knowledge now calls for a wider and deeper set of explanations for why some of us experience good health and others do not This body of knowledge challenges us to think beyond common assumptions about the key causes of health and illness to ask not only What influences health but also What factors shape those influences i e What influences the influences This knowledge tells us that to achieve real and lasting improvements in health we must shift the focus to identifying and addressing the root or fundamental causes Link and Phelan 1995 the underlying factors that set in motion other factors that may be more easily

observed but play a less fundamental role in shaping health Ethical concerns furthermore require us to focus not only on a population s overall or average health but also on health equity whether everyone has a fair and just opportunity to be as healthy as possible which includes whether the resources opportunities and conditions required for good health are distributed equitably within the population
