

# Piaget's Cognitive Development Theory

## Sensorimotor (0-2 years)

Infants explore the world through senses and movement, developing object permanence - understanding objects exist even when unseen.

## Preoperational (2-7 years)

Children begin to think symbolically, using language and imagination, but their thinking is intuitive, egocentric, and lacks logical reasoning.

## Concrete operational (7-11 years)

Children start thinking logically about concrete events, grasping conservation (understanding quantity remains constant despite shape changes), and become less egocentric.

## Formal operational (11+ years)

Adolescents develop abstract and hypothetical reasoning, able to think logically about possibilities, concepts, and future scenarios.
